Retail Home& Decor Catalogue

Quality/Durability

Fiberglass is extremely strong, though flexible, and lightweight, with a very high tensile strength. Fiberglass products are known for superior finishes and being lightweight, ideal for easy handling. Inside or outside, the variety of finishes make mardeou products perfect for any location. It is a non-porous material and extremely UV stable, and can withstand extreme heat or frozen weather without affecting the structural ability like warping or becoming brittle like plastic. It does not crack/break easily like concrete/cement and can literally last a lifetime (50+ years). It can easily be repaired or painted and requires very little to no maintenance. It is also fire retardant.

Animal/Plant Health

Fiberglass is non- toxic, and because it is a non- porous material, it does not leech or extract any chemicals into or from soil or water. It has no influence on acidity/alkalinity and it conducts very little heat compared to other materials. This makes it a very safe material for storing animal feed/water and for plant soil. Fiberglass planters are the best for darker coloured pots as it does not conduct the same heat to plant roots like concrete/cement planters. Plastic planters still leech chemicals into the soil.

Why is it more expensive?

The raw materials of fiberglass products are on average 40%+ more expensive than plastic and concrete/cement.

The manufacturing process is also more labour intensive. The initial cost might be a bit more than plastic or concrete/cement products, but the quality and durability of at least decades of use and enjoyment and the other benefits stated above, makes it a worthwhile purchase decision. It is a classic case of. "You get what you pay for".

Colours

We provide any colour or colour combinations that you want. We spray paint the majority of our products with 2K automotive paint, which provides a much wider array of colour options, thus any colour you want can be matched. Provide us with the Pantone code or RAL code or a physical sample.

<https://www.pantone-colours.com/>

Exterior Finishes

On the right is an example of a Textured Pot. This texture is available on any of the pots we manufacture.

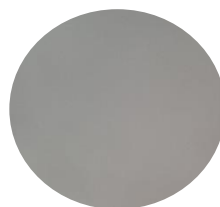

Alternatively, the smooth exterior comes as standard.

Our Most Popular Colours

Oyster White

Concrete Grey

Graphite Grey

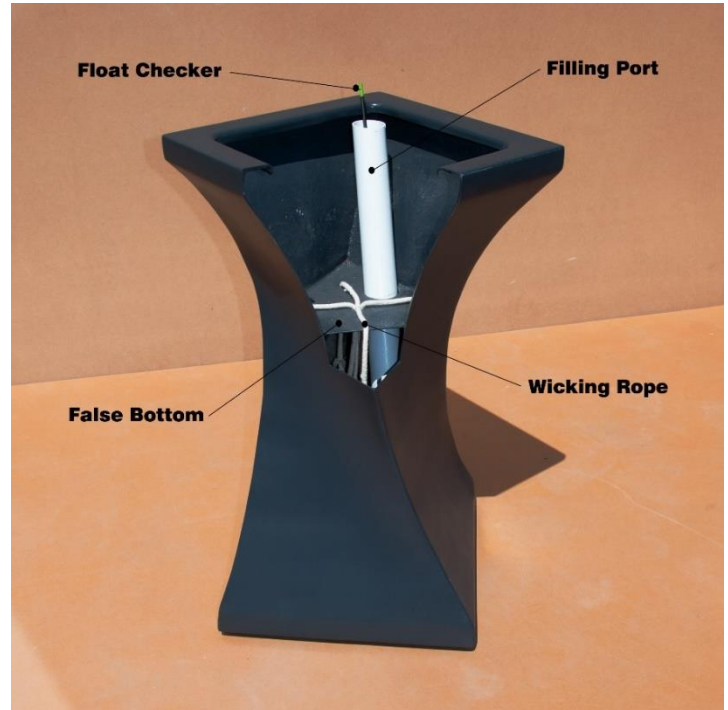

False bottoms

Thanks to the endless possibilities of fibreglass, the addition of a false bottom is available in most of our pots

The addition of false bottoms is a special service and clients will be required to contact us with regards to the installation thereof

Self-Watering

The false bottom provides a hollow cavity which is repurposed for a water reservoir. A filling port and float checker is installed, along with wicking rope to ensure that the water reaches the soil at the bottom of the pot.

Bolt Down/Fastening

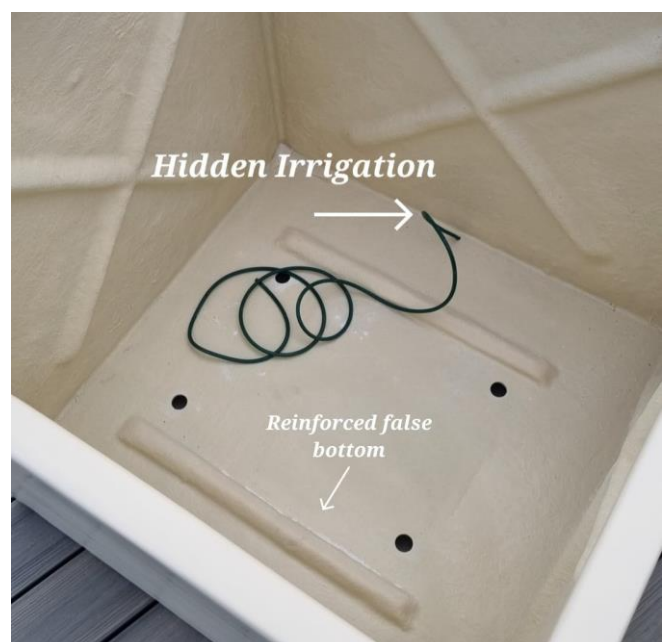

Our products can be bolted down to a surface or substrate. The addition of a metal plate within the fibreglass provides a reinforced fastening point that can withstand **250kg of pressure per plate** before deformation takes place. The amount of reinforced fastening points depends on the product.

This option, combined with our superior light weight, make our products ideal for rooftop gardening.

Drainage Holes & Hidden Irrigation

Drainage holes are provided upon request. Our products are made in moulds which do not have a pre-positioned location for drainage, thus the flexibility of drainage on our products are endless.

We also have the ability to hide irrigation within the pot itself. This is done with the addition of a false bottom/floor in the pot. A hole can be drilled in a suitable spot in the pot for the irrigation and drainage hole/s where you want it. This is quite popular in places where you do not want the irrigation visible and no soiling of draining on the surface where the pot is placed, eg. on a deck.

Pots and Planters

All Mardeou branded pots are handmade at our own facility, Atlantic Fiberglass Products (PTY) Ltd in Montague Gardens in Cape Town, South Africa.

Apollo Round

This pot has a tapered profile with defined vertical lips at the top and bottom of the unit. This unit has feet incorporated into the design and comes as standard with drainage holes.

Standard Round

This pot has a tapered profile with defined rim round the top of the unit. This unit has feet incorporated into the design and comes as standard with drainage holes.

Shallow Herb

This pot has a UFO like appearance and is ideal for shallow root plants

Dome

This pots design has made it multi-functional,
as a planter and ice bucket

Ball

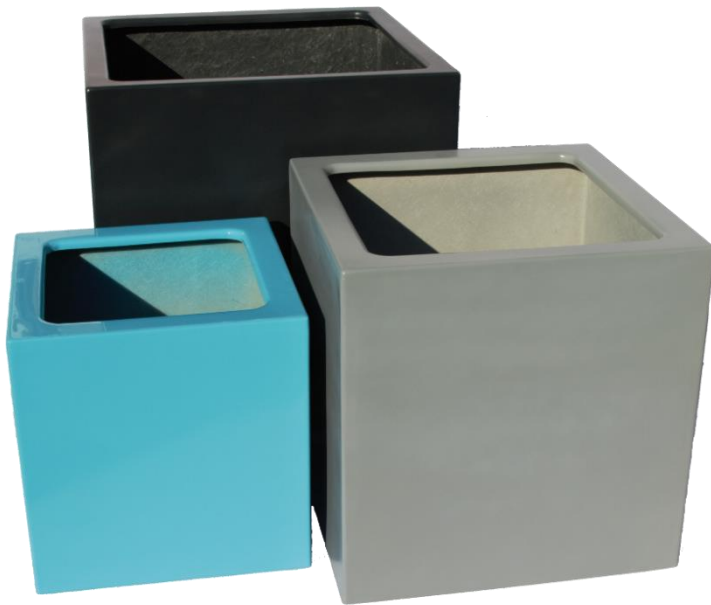

This pot is a sphere with a defined lip at its opening and foot at the bottom

This extreme left example showcases a unique speckle coat finish that was done for a client. The left example showcases a resin cured rope exterior and terracotta finish.

Rectangular Pots

Standard Rectangular

This pot comes in three sizes and the unit has feet incorporated into the design and comes as standard with drainage holes.

Rounded Ends Rectangular

This rectangular pot has rounded ends and comes with feet incorporated into the design

Flower Trough

This pot resembles the usual terracotta flower box, however our design has 3 raised feet incorporated into the design

Tall Rectangular

This pot is based on the 190L standard rectangular and is stretched vertically to a height of 60cm.

Raised Rectangular

This pot is based on the 190L standard rectangular and has two square posts/legs supporting the standard shape.

False bottoms seal the standard body from the posts/legs

Speciality Pots

Square Pillar

This pot has a defined edge around the top and bottom of the unit

Concave Pillar

This pot has defined edges round the top and bottom of the unit, as well as concave indents on all four sides

Twisted

This pot is a rectangular pot with its top square twisted to 45 degrees, resulting in a modern twisted profile planter

Rectangular Window

This tall rectangular pot has a rectangular hole through its middle. This pot has a false bottom and drain plug incorporated into the design to reduce the soil capacity, but promote stability by filling the section below the false bottom with water

Double Decker

This pot has two planting cubes separated by two corner posts

River Rock

These pots come in two sizes/shapes

These pots are only available in the colors displayed in the images namely:

Dark Speckled Stone & Light Speckled Stone

Rectangular Balcony Rail

This pot has a cavity at the bottom in order to hang the pot over a railing or balustrade or vibracrete wall

Round Balcony Rail

This pot has a cavity at the bottom in order to hang the pot over a railing or balustrade or vibracrete wall

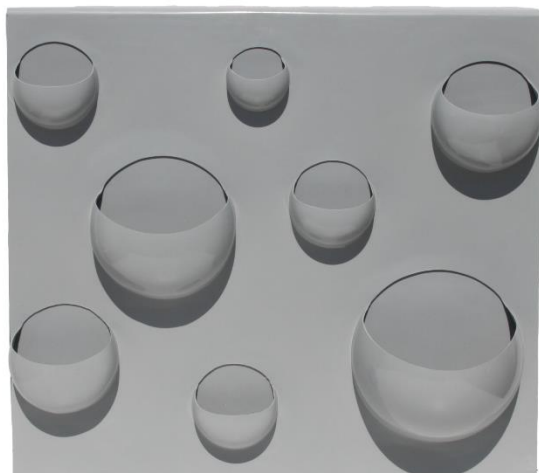

Balcony Tray Pot/Ice Bucket

This unit hangs over any balustrade or railing and features a tray-like surface that provides additional/alternative surface space. On the opposite side of the railing hangs a 10L planting pocket or ice bucket, that can comfortably hold 5 bottles of wine.
