Chimney Cowls Catalogue

Quality/Durability

Fiberglass is extremely strong, though flexible, and lightweight, with a very high tensile strength. Fiberglass products are known for superior finishes and being lightweight, ideal for easy handling. Inside or outside, the variety of finishes make mardeou products perfect for any location. It is a non-porous material and extremely UV stable, and can withstand extreme heat or frozen weather without affecting the structural ability like warping or becoming brittle like plastic. It does not crack/break easily like concrete/cement and can literally last a lifetime (50+ years). It can easily be repaired or painted and requires very little to no maintenance. It is also fire retardant.

Animal/Plant Health

Fiberglass is non-toxic, and because it is a non-porous material, it does not leech or extract any chemicals into or from soil or water. It has no influence on acidity/alkalinity and it conducts very little heat compared to other materials. This makes it a very safe material for storing animal feed/water and for plant soil. Fiberglass planters are the best for darker coloured pots as it does not conduct the same heat to plant roots like concrete/cement planters. Plastic planters still leech chemicals into the soil.

Why is it more expensive?

The raw materials of fiberglass products are on average 40%+ more expensive than plastic and concrete/cement.

The manufacturing process is also more labour intensive. The initial cost might be a bit more than plastic or concrete/cement products, but the quality and durability of at least decades of use and enjoyment and the other benefits stated above, makes it a worthwhile purchase decision. It is a classic case of. "You get what you pay for".

Chimney Cowls

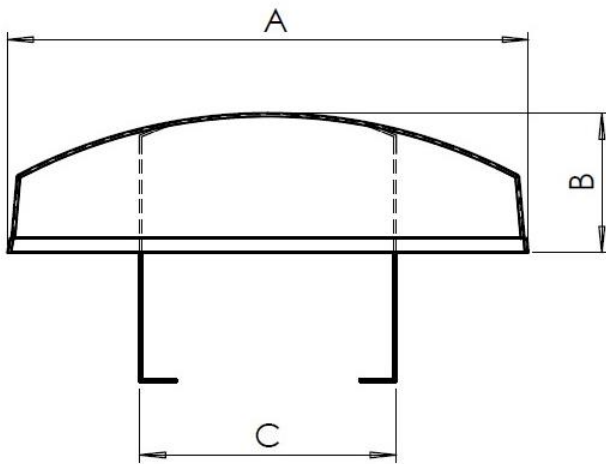

All Mardeou branded pots are handmade at our own facility, Atlantic Fiberglass Products (PTY) Ltd in Montague Gardens in Cape Town, South Africa.

Chimney Cowls

Chimney Cowls

Our chimney cowls are available in multiple sizes. These units come with feet brackets, which bolt directly to the upper flange/surface of the chimney. This product is a no-rust solution to the existing products on the market and has been tested and proven to improve extraction. We can also make custom rectangular cowls.
